

CLEANING OF LUMINAIRES

All luminaires from Glamox may be cleaned with a neutral washing detergent (pH 6-9).

Put the washing detergent in lukewarm water. Wash with a cloth, a sponge or similar. Rinse with fresh water and dry with a clean cloth.

CAUTION: Organic solvent based or strong alkalic detergents should be avoided as they can damage components over a long period of time, and especially components made from synthetic materials.

REFLECTOR

For cleaning high lustre aluminium we recommend the use of a soft clean cloth without any washing detergent additive. Be aware that high lustre aluminium can be very sensitive to scratches.
